- Hardwood Blue 371008

Please see Sighting Systems for additional information on scopes and scope mounts.

Anschütz rifles are making their mark in the Benchrest world. The 2013 Benchrest is the flatbottomed, four action screw receiver, bolt and trigger, now used by most of the International and Olympic shooters around the world. The walnut stock has a wide flat forend. The action has very fast locktime and the trigger is fully adjustable.

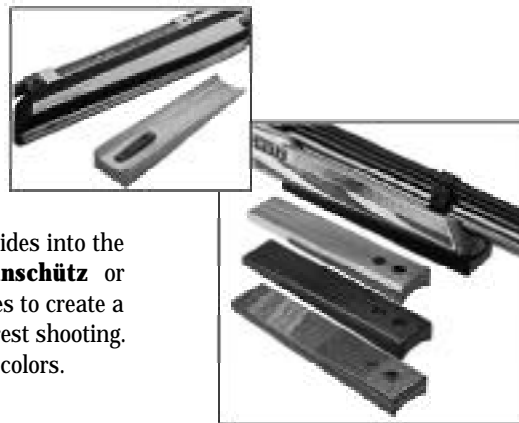

The barrel on this action is held by clamping screws which allow barrel changes in just minutes. Head spacing is critical on this action and should be checked with each barrel change.

A 500mm chrome-moly barrel is standard. Factory barrels are available in chrome-moly or stainless, 500mm standard weight, 660mm standard weight and 690mm heavy weight.

Anschütz 2002 CA Stock for Benchrest

The 2002 Compressed Air model **Anschütz** benchrest rifle set a new World Record in Air Rifle BR-50 of 4950 in Birmingham, Alabama. We have seen excellent test groups here in our shop with this gun. Scopes are easy to mount using the **Gunsmithing, Inc.** mount and the offset cocking lever. The offset lever does not come on the gun as standard equipment, so please let us know the specific use for your gun, and we can install the cocking lever for you. The benchrest stock is walnut with a straight forend, but the standard International laminated stock is the most popular. The other stocks, as shown in the Precision Air Rifle section, are also available. The 2002 Benchrest Air Rifle is available in pneumatic and compressed air.

AHG Anschütz Wedge for Benchrest Shooting

The **AHG** Wedge slides into the accessory rail of **Anschütz** or **Feinwerkbau** air rifles to create a flat forend for benchrest shooting. It is available in four colors.
