

Shooting Glasses

Gehmann
Iris for normal eyeglasses 13390
Color Filters - Set 13392

Shooting Glasses are quite different as they are designed to give the best possible sight correction along with some other added accessories. They are completely adjustable so that the lens(es) can be oriented to the center of the line of vision and at right angles to it, no matter your head position. Added accessories include adjustable irises, color filters, blinders for the non-aiming eye and blinders for the sides. Shooting glasses are normally sold without any lenses as the user has his own prescription installed. That is why there is no safety rating. Shooting glasses do offer a degree of protection when the lenses are installed.

As a step toward full shooting glasses **Gehmann** has a fully adjustable iris that attaches to ordinary eye glasses. The **Gehmann 390** flips up and out of the way for normal vision and can be easily positioned within its frame for optimum alignment to the eye and perfect depth of field for focus. Color filters are available and are easily pressed into the iris. The set contains three colors: yellow, gray and brown. This is useful to all shooters but mostly for pistol shooters.

Gehmann Iris

Merit
Deluxe Optical Attachment 60255

Merit Deluxe Optical Attachment

Also for the pistol shooters, **Merit** has the Deluxe Optical Attachment that attaches to your glasses with a suction cup and really clears up those fuzzy sights. The aperture adjusts from .020" to .155".

AHG Anschütz
Headband with Jointed Blinder 37321
Jointed Blinder 37329
Headband with Blinder 37324

AHG Anschütz has come out with two blinders that are attached to headbands. One is a jointed blinder that can be tilted to all sides by a joint. These are infinitely adjustable to the shooter. The other is a non-reflective and scratch-resistant blinder.

Anschütz Headband w/ Blinder

Anschütz Clip-on Blinder

The headbands have elastic exterior, absorbent interior and are very colorful.

Gunsmithing, Inc. Blinder

To reduce eye strain and cover the non-aiming eye, use a clip-on Jointed Blinder. These eye shades clip onto either your glasses or the bill of a cap. They both flip up and out of the way when not in use. The **AHG Anschütz** blinder is approximately 1.5" by 2".

Gunsmithing, Inc.
Blinder (white) 60001
Side Blinder Set 60002

The **Gunsmithing, Inc.** blinder is available in non-reflecting flat white finish and is 2.25" in diameter.

Reduce peripheral vision distractions with the side blinder set that slides onto the glasses temples. These blinders are made of opaque, durable, long lasting, green plastic.

We acquired the **Champion** Line of shooting glasses when Jack Foster of Accuracy International retired. He has sold these glasses with great success for many years to many very satisfied customers.

The **Champion** frames are available in three styles. Once a frame style and a lens holder size has been chosen, a great many accessories are available. Lens holders are available in 25mm for the rifle shooters, 42mm for the pistol shooters and 32mm for those who want something in between.

The available accessories include filters, nose bridges, blinders and cases. See the price list for a complete list of all the **Champion** shooting glasses accessories.

The Olympic model is just about the ultimate in adjustability. Everything on the frame is adjustable from the brow bar to the ear pieces to the nosepiece to the lens holders. The Olympic comes with a case, double blinder and one lens holder.

Champion Shooting Glasses Model Olympic

We have the World 1 frame set which has a fixed height nose piece. It comes with a case, double blinder and one lens holder.

Champion Shooting Glasses Model World 1, shown with optional 42mm Iris and 42mm Lens Holder

The World 2 frame set is the same as the World 1 except that it has an adjustable height nose piece. It also comes with a case, double blinder and one lens holder.

Winner Headband Shooting Glasses

Winner Headband Shooting Glasses

Winner has come out with a new concept in shooting glasses. There has always been a problem with keeping glasses positioned just right, and most shooters wear some sort of a headband. So ... we now have the **Winner** Headband Shooting Glasses. The headband fastens in the back with velcro so it is tight and comfortable. You can place it exactly where you need it, and it will stay there. The lens holder, blinders, nose piece and any other accessories clip directly to the headband and are fully adjustable with quicklocks at all moving points. There are no earpieces to annoy or slip and change the position of the lens. The basic set includes the headband, one lens holder, one blinder, frame, nosepiece and case.

-----------------------------	-------

Knobloch Shooting Glasses have been around for over 30 years and are the most widely used shooting glasses in the world. They were developed by the late Bruno Knobloch, a qualified optician and active shooter, who really knew all the problems involved with shooting and optics.

Knobloch Optik Universal Frames

The special construction of **Knobloch's** Universal Shooting Glasses permits shooters to adjust the lens to any position suitable to the correct angle of sight. You can adjust the lens so that no matter what angle you view the target, you automatically look through the very center of the lens. As the name **Universal** implies, the shooting glasses serve a universal purpose for rifle and pistol shooting, for right- or left-handed shooters, as well as for all types of aiming.

Knobloch Optik 37mm lens holder (left), 23mm lens holder (center), and 23mm lens holder offset (right).

Lens holders come in two sizes and two forms. One 37mm holder comes with the frames and can be either for rifle with the screw at nine o'clock or pistol with the screw at seven o'clock. 23mm holders are also available. The 23mm lens holder will move higher up on the glasses frames and allow greater peripheral viewing of the wind flags. They come in two forms, straight and offset. The offset holder allows the lens to be closer to the shooter's eye.

The **Knobloch** centering device is used to enable the shooter to set the lens in the correct position. The centering device is temporarily placed over the lens holder. The shooter moves the lens holder while in shooting position until the aperture in the centering device aligns with the sights and the target. The device is then removed for shooting.

Centering Device

Side Blinder, (left) and Cover Disc (right)

A fully adjustable lens is only part of the story. In addition, there are cover discs for the non-aiming eye. For shooters, it is important to keep both eyes open. The closing of the non-aiming eye affects the aiming eye and leads to fatigue in the eyes. Another accessory for shooting glasses is blinders. They protect against light and glare. Many shooters feel they help avoid distractions and aid in concentration.

For pistol shooters, an adjustable iris and color filters are available to control light and help focus on the front sight.

Adjustable Iris for Pistol, Large and Small

The Screwdriver for Lock Screws is a very helpful tool as you work with your new shooting glasses.
